

MUHAMMAD HAIDER ALI

Software Engineer — Backend, Full-Stack & AI-Assisted Applications

Islamabad, Pakistan (Open to Remote) | haideraliraja344@gmail.com | +92 327 5060610

[linkedin.com/in/muhammad-haider-ali-66828b337](https://www.linkedin.com/in/muhammad-haider-ali-66828b337) | github.com/ihaider2006

SUMMARY

Final-year Computer Systems student and co-founder of a small software studio, building full-stack and AI-assisted SaaS products end to end — from PostgreSQL schema design through secure REST APIs to production deployment. Comfortable owning a feature from database to UI using Python, Node.js, React and Next.js.

TECHNICAL SKILLS

Languages: Python (DataWise AI), JavaScript / TypeScript (Flow, Hashi Ventures), SQL, C++, Dart

Frontend: React, Next.js, Tailwind CSS (Flow, Hashi Ventures) — HTML5, CSS3, Flutter

Backend: Node.js, Express.js, REST API Design, JWT Authentication (Hashi Ventures, CoRide)

Database: PostgreSQL, Supabase, multi-tenant schema design (Flow) — Row-Level Security (RLS),

Query Optimization **AI / LLM:** LLM Integration, RAG, AI Agents (Flow) — Prompt Engineering, SQL

Generation (DataWise AI) **Tools & DevOps:** Docker, Git, GitHub, Render, Vercel

EXPERIENCE

Client Acquisition and Lead Engineer — Hashi Ventures *Software venture studio | Pakistan (Remote) | 2024 – Present* • Co-founded a two-person venture studio and served as lead engineer, architecting and shipping **3+ full-stack products** for early clients using Next.js, Node.js, PostgreSQL and Supabase within **strict 4-to-6 week delivery cycles**. • Designed and implemented REST APIs with JWT authentication and Dockerized deployment workflows, **reducing average deployment setup time by 40%** while taking projects from schema design through to a working client-facing product. • Operated as the sole engineer across concurrent client projects, making architecture and stack decisions independently while balancing delivery against full-time coursework with a **100% on-time project completion rate**.

PROJECTS DataWise AI — AI-powered analytics platform • Built a Python-based analytics tool that lets non-technical users query a database in plain English by converting natural language input into SQL through an LLM pipeline, **automating entry-level data analyst tasks to save stakeholders 15+ hours per week**. • Designed the prompt-engineering and query-validation layer to constrain generated SQL to safe, read-only operations, **achieving 98% query execution accuracy with zero unauthorized data mutations**.

CoRide — Ride-sharing backend prototype • Designed a scalable PostgreSQL schema and backend architecture for a ride-matching application, enabling a platform designed to **save individual commuters up to 40,000 PKR monthly** in recurring travel costs. • Implemented core backend logic and REST endpoints to handle ride requests and status updates end to end, **optimized to process local ride-matching queries in under 200 milliseconds**.

Flow — WhatsApp CRM & automation platform • Engineered a visual, node-based workflow builder on a React Flow canvas, letting businesses design conditional lead response logic without writing code, **slashing automation setup time from days to under 30 minutes**. • Integrated an LLM-powered AI agent (via OpenRouter/DeepSeek) with retrieval-augmented generation and conversation memory to auto-generate context-aware WhatsApp replies, **cutting response time from hours to milliseconds and driving 24/7 autonomous sales**. • Designed a multi-tenant Supabase PostgreSQL backend with real-time data tracking across contacts, conversations, and broadcast pipelines to support concurrent business accounts, **capable of securely handling 10,000+ daily interactions**.

EDUCATION

BS, Computer Systems Engineering — Riphah International University / Islamabad, Pakistan

CERTIFICATIONS : IBM — Introduction to Cloud Computing • NVIDIA — Introduction to Networking
